

BUSINESS CASE	
Proposed Project	Territory Management Simulator Game
Date Produced	19 th September 2026
Background	This project will adapt an established original fantasy setting featuring distinct factions (e.g Clans) managing resources across named territories into a turn-based simulation game. This established lore provides an engaging but mathematically deterministic foundation, ensuring the resulting application is perfectly suited for the rigorous testing required by the course curriculum.
Business Need/ Opportunity	A strong consumer opportunity for lightweight, browser-based entertainment that can be enjoyed in downtime, promoting critical thinking and turn-based sessions.
Options	Perform the project.
Cost-Benefit Analysis	
Costs: Zero Financial Expenditures Time Costs: ~2-month time frame Possible risk: Over complexity and possible failure Maintenance: Effort required to maintain and update the system.	
Proposed market value: This is just a commercial project Future scalability: This project is a developing one and has the capability to be expanded later Improved useability: It will be an easy process for the users to follow Reliability: The system is expected to perform very optimally with a high chance of reliability.	
Recommendation
